"Analysis of the chromosome sequence of the legume symbiont
Sinorhizobium meliloti strain 1021.";
Proc. Natl. Acad. Sci. U.S.A. 98:987-9882(2001).
-I- FUNCTION: This enzyme is an endonuclease that degrades the RNA of
RNA-NNA hybrids specifically (By similarity).
-I- CATALYTIC ACTIVITY: Endonucleolytic cleavage to 5'-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RNHA OR RNHA1 OR R00914 OR SMC00018.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       COPACTOR: Binds 1 magnesium ion per subunit (By similarity).
SUBUNIT: Monomer (By similarity).
SUBCELLULAR LOCATION: Cycoplasmic (Potential).
SIMILARITY: Belongs to the RNase H family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PP00075; rnaseH; 1.

"A PCR method for the sequence analysis of the gyrA, polA a
gene segments from mycobacteria.";
Gene 136:287-290(1993).
-i- FUNCTION: This enzyme is an endonuclease that degrades
RNA-DNA hybrids specifically.
-i- CATALYTIC ACTIVITY: Endonucleolytic cleavage to 5'-

COPACTOR: Binds I magnesium ion per subunit (By SUBUNIT: Monomer (By similarity).

SUBCELLULAR LOCATION: Cytoplasmic (Potential).

SIMILARITY: Belongs to the RNase H family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        115

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        phosphomonoester.

COFACTOR: Binds 1 magnesium ion per subunit
SUBUNIT: Monomer (By similarity).

SUBCELLULAR LOCATION: Cytoplasmic (Potenti:
SIMILARITY: Belongs to the RNase H family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             140 VVVYTDGCCSSNGRRKPRAGIGVYWGPGHPLNVGIRLPGRQ-----
